

BRF

Stretcher Bars and Picture Frames Milling Machine

BRF for double end processing

The Stegherr BRF machine can mill pre-cut profiles (c. 250 – 3000 mm long) for the manufacture of stretcher bar frames (tongue and groove). Two machine versions are available: For double end and for single end processing.

On the double end BRF the profiles are fed fully automatically from a horizontal feeder. An original patented outfeed system returns the finished workpieces underneath the machine table to the operator.

BRF for single end processing

If a flexible handling of a wide variety of frame lengths is requested, the solution is a single end BRF which can mill simultaneously two profiles at one end. For milling the opposite end the bars are turned manually by 180°.
