

Measuring system MS

for the manufacture of windows and doors

Owing to its sturdy execution and simple handling this measuring wand is the ideal instrument for measuring the daylight opening (DLO) in the manufacture of windows and doors.

The size is measured with the help of a magnetic tape and a reading head for the electronic evaluation of the impulses and is transmitted wirelessly to the machine by simply pressing a button.

The non-contact technology ensures that the measuring system is not subject to any mechanical wear. This guarantees a long service life and unvarying accuracy.

Resolution: 0.01 mm.

Measuring range: 0 to 1000 mm or 0 to 2000 mm
